Research Methods and Statistical Analysis

Advanced quantitative and qualitative research in the social sciences, including measurement development, psychometric evaluation, Structural Equation Modeling (SEM), multilevel analysis, latent profile analysis, and social network analysis. Extensive experience with SPSS, AMOS, R, Python, and Tableau.

AI and Computational Tools for Research

Proficient in leveraging large language models (LLMs) and AI-powered tools—including ChatGPT, Claude, and custom AI workflows—to enhance research productivity. Applications include AI-assisted literature review and synthesis, statistical analysis and code generation (R, Python), qualitative coding support, survey design and item refinement, and academic writing and editing. Experienced in critically evaluating AI-generated outputs to ensure scientific rigor and transparency.

Synopsis of Research

Present Academic Activities

My research program broadly investigates the dynamics of social identity, intergroup relations, and well-being, with three interconnected foci: (1) intergroup conflict and reconciliation, exploring psychological processes underlying conflict, prejudice, and interventions aimed at fostering coexistence and tolerance among youth; (2) antisemitism, racism, and discrimination, investigating the impact of antisemitism and other forms of discrimination on psychosocial health, coping strategies, and social participation; and (3) health psychology and chronic conditions, improving the lives of children and adults navigating chronic conditions by examining illness identity, social support, and health-related quality of life. My teaching approach emphasizes experiential and applied learning, encouraging students to understand concepts within their real-world context.
